Education

2003 **B.Sc. in Physics**, *Université Paul Sabatier (UPS)*, Toulouse, France, Thesis: *Mars atmosphere and surface composition measurements with gamma spectrometry*.

2005 **M.Sc. in Astrophysics and Planetology**, *UPS*, France, Thesis: *X-ray spectrometry of the Moon surface*.

2006 **M.Sc. in Space Engineering and Instrumentation**, *UPS*, France, Thesis: *Application of radar interferometry to the study of a local subsidence*.

2010 **PhD**, *TU Braunschweig*, Germany, Thesis: *From observations and measurements to realistic modeling of cometary nuclei. Grade: "Sehr Gut Bestanden"*.

Professional Experience

2010-2016 **Post-doctoral researcher**, *MPI for Solar System Research*, Göttingen, Germany.

2016-2023 **Researcher**, *DLR Institute of Planetary Research*, Berlin, Germany.

Responsibilities
- **Co-Investigator** and **Science Planning Lead** for the OSIRIS cameras (ESA's Rosetta). **Coordinator** of the working group on *cometary activity* for this instrument.
- **Associate scientist** with NASA's Dawn mission.
- **Co-Investigator** on the joint ESA/NASA AIDA asteroid deflection proposal, **chair of the working group** on data analysis.
- **Co-Investigator** of NASA's CAESAR (comet sample return). **Deputy-PI** and **Lead Science Planner** of the camera suite.
- **Co-Investigator** on Hayabusa 2 (JAXA) asteroid sample return mission.
- **Leader** of an ISSI international team (Collisions in the Early Outer Solar System).

Research interest: active processes on small bodies

Comets Active processes in ground and space based observations, modeling of activity at various scales, link to physical and morphological properties of cometary nuclei.

Asteroids Study of impacts and crater morphologies and surface physical properties. Theoretical work on defining better scaling laws to describe cratering processes on small bodies.

Formation/ Evolution Modeling and theoretical work on relating current observations of small bodies to general models of Solar System formation and evolution processes.

Awards

2010 **A&A highlight** for my paper on "A numerical model of cometary dust coma structures: application to comet 9P/Tempel 1".

2013 **NASA award** for my scientific contribution to the Dawn mission.

2017 **NCU-Delta Young Astronomer Lectureship Award** for "outstanding achievements in astronomy research", National Central University of Taïwan.

2017 **ESA Award** for "outstanding contribution to the Rosetta mission".

2018 **Outstanding Reviewer** title awarded by the journals *Icarus* and *PSS*.

Teaching & Mentoring Experience

2002-2005 **Teaching assistant in mathematics and physics for middle school students**.

2008-2014 **Planetary science lectures for Master and PhD**, *TU Braunschweig & Uni. Physics Göttingen*, Cometary science; Remote sensing techniques; Solar System dynamics; Impacts, craters, and regolith formation; Image processing techniques.

2012-2016 **Supervision of a PhD thesis on "Thermal properties of cometary active regions"**, *IMPRS & TU Braunschweig*, 3 articles published by my student.

2015-2016 **Supervision of a Bachelor thesis on "Long-term Monitoring of Cometary Jets with the Rosetta Mission"**, *Uni. Göttingen*, 1 article published by my student.

May 2017 **Series of lectures on comets and asteroids**, *National Central University Taiwan, National Dong Hwa University Taiwan*.

Additional information

Date of birth 30 May 1983, Toulouse, France

Languages French (native), English (fluent), German and Spanish (good)

Computer skills Daily usage of Windows and Unix, large experience in programming (C/C++, Matlab, Python, Java, HTML, Javascript, PHP/MySQL, MIDAS)

Hobbies Music, scuba diving (CMAS 3*, assistant-instructor), programming, origami, reading

First author scientific publications

March 2020: I have coauthored 144 peer-reviewed articles, ***12 as first author****. My* ***h-index is 44****, with a total citation count > 6600 (Sources: NASA ADS, Google Scholar). I have presented my work at* ***36 international conferences****, including* ***14 invited talks****.*

12 Vincent et al, *Local manifestations of cometary activity*, SSR (2019).

11 Vincent et al, *Cometary topography and phase darkening*, A&A (2019)

10 Vincent et al, *Constraints on cometary surface evolution derived from a statistical analysis of 67P's topography*, MNRAS (2017)
